

CLAIMS**What is claimed is:**

1. An oscillation data recording water, characterized by:

5 said water being a material mainly usable as a medium for recording oscillation data,

 wherein said water is produced via a step of mixing, at a predetermined ratio, sodium chloride with a water contacted with Fe compound, obtained by holding minerals containing Fe compound in aqueous contact with purified water for a predetermined
10 duration,

 followed by executions, repeated a predetermined number of times, of a step of diluting said mixed solution with purified water by a predetermined ratio and a step of stirring said mixed diluted solution for a predetermined duration.
